

Something green your whole family will like!

Allied Telesis 'green' eco-friendly products consume up to 50% less power than our competitors, thus helping to save the planet for your children.

With the lowest operating power in the industry, Allied Telesis eco-friendly switches can dramatically reduce your network running costs, whilst providing all the functionality needed for today's high performance IT requirements. We believe that over a five year period you can save between 25% and 50% of your network running costs.

Don't be fooled by the green marketing hype put out by many of our competitors.

Read the small print on actual power consumption, or in the case of Allied Telesis products, read the large print.
